

Number of individuals served by a KM output, by type

Indicator Number:

14

Category:

KM General

Subcategory:

Primary Dissemination

Logic Model Component:

Outputs (Reach and Engagement)

Data Type(s):

Count

Short Definition:

Captures the number of people that a KM output directly influences, disaggregated by type of output

Definition and Explanation (Long):

This indicator captures the number of people that a KM output directly influences. The type of KM output should be specified so data can be aggregated or disaggregated as needed.

For instance, the number can represent people attending a meeting, seminar, or conference as well as those joining in a virtual learning or networking activity. This number could also represent the subscribers or recipients of a product, service, or publication. The indicator can be used to measure various kinds of outputs.

Data Requirements:

Quantitative data from evidence that intended users—such as recipients, subscribers, participants, or learners—have received, registered, or participated in a particular KM output, whether in person or virtually.

Data Sources:

Mail (postal or email), contact, or subscriber lists; registration or attendance records; and other administrative records and databases

Frequency of Data Collection:

Quarterly

Purpose:

These data chart the initial reach of the KM output and identify which users were addressed. This is one of the most basic indicators for measuring reach. It is a simple way to gauge initial communication of and access to the KM output. The various ways data can be stratified can help profile the user.

Issues and Challenges:

Supplementary information collected could include demographic and job-related characteristics of these individuals, such as the country/region where they work and their organizational affiliation, job function or type, gender, and level of education. Additional information may also include the type of dissemination or promotion and the communication channels used, such as print, in-person, electronic (either online or offline), or other media.

Adaptation of Indicator for Specific Purpose (Illustrative Examples):

- Number of registered learners in an eLearning service
- Number of recipients who received a copy of a handbook via initial distribution
- Number of registered participants in a training seminar
- Number of fans and followers on social media accounts

Sample Topics and Questions for Data Collection Instruments:

How many times have you accessed the [Web product] in the past 3 months? (Select one.)
